

Help US Help YOU

A clean safe environment is in everyone's best interest!

You can't smoke anywhere these days it seems. Might as well do it now before you get into the restaurant, right? Wrong. Smoking near fuel pumps isn't a good idea. Fuel vapours can ignite around any source of flame. If you think smoking is bad for your health, wait 'til you light up a hundred litres of diesel fuel. Still want that cigarette?

Sure you can save a few minutes by washing your windows, checking your oil or drinking a coffee while you're fueling, but a spill will take a while to clean up. We're talking about a messy process and there'll be all kinds of paperwork to deal with too. Is blocking the fuel nozzle just to save a few minutes really such a good idea?

Don't you hate it when someone spills a puddle of fuel on the ground and you walk right through it, tracking the stuff into your nice clean cab? While drivers may have a little diesel fuel in their veins, most of them sure don't like the smell of the stuff in the cab. Okay, maybe it smells better than those little Christmas trees, but let's make it a personal choice: if you do spill a little fuel on the ground, please be considerate and clean it up. Better still; take care to prevent the spill in the first place.

Ultramar cares about the environment we live in, and the environment you work in. Please help us help you keep it clean and safe for now, and for the future.

- Please don't risk a spill by blocking the pump nozzle open while you're fueling. Keep your hand on the nozzle at all times.
- Don't risk causing a fire or explosion by smoking around fuel. It's a risky practice and one that can be easily avoided.
- Be considerate of other customers who use our facilities. We strive to keep the areas as clean as possible and you can help by notifying us of a spill, or better still, preventing them.
- We're asking for your help because we care!
